DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
2. The disclosure is objected to because of the following informalities: it is not understood how the term "foreigners" is used in the disclosure (page 4, line 19. The term "foreigners" is usually meant to mean 'a person belonging to or owing allegiance to a foreign country'.

Appropriate correction is required.

Double Patenting

3. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).
4. A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.
5. Claim 1 is rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 15, 10 and 14 of prior U.S. Patent No. 6,160,279. This is a double patenting rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Yonehara, EP 0 390 608 A2.

7. Yonehara teaches a semiconductor device as claimed. See pages 2-4, where

Yonehara discloses a semiconductor device comprising:

a crystalline semiconductor film (Related Background Art, not numbered) which is used for a thin-film transistor which is formed over an insulating surface (inherent to TFT's)

said crystalline semiconductor film being an active layer of a thin film transistor having at least one of channel, source, drain regions and containing a catalyst for promoting crystallization of silicon, (it is also inherent that an active layer of a thin film transistor has at least a channel, source, drain regions)

wherein said catalyst is selected from group IV (C, carbon, Si, silicon, Ge, germanium, Sn, tin, Pb, lead) elements (also see page 4, lines 9-11, where Yonehara discloses the catalyst concentration which Applicants claimed range falls within Yonehara's range).

Wherein the said channel region contains said catalyst at a concentration of 1×10^{15} - $5 \times 10^{19}/\text{cm}^3$.
